Advances in Accounting Education: Teaching and Curriculum Innovations publishes both non-empirical and empirical articles dealing with accounting pedagogy.

Using evidence from the microfinance sector, which is considered a leading sector of social entrepreneurship, this book attempts to push the boundaries of research in this field. While recent studies consider that commercial enterprises, not-for-profits and social enterprises are formed by entrepreneurs with different personal identities, they do not explain why these personalities may change before they convert their social enterprises, and change further at the stage of transitioning into commercial enterprises. Presenting a theory of development and evolution for social enterprises which examines the dynamics associated with change, impact and growth and an in-depth critical view of motivation, funding and profit, this book examines how that impacts the social mission and enterprise structure in the wake of hybrid and for-profit models and corporate philanthropy. The author highlights the 'cracks' in social entrepreneurship and asks how they are being filled, institutionally.

This book utilizes citation analysis of recent articles and books to identify influential scholars, important works, and patterns of issues and trends in criminology and criminal justice research.

An adaptation of 'Social Research Methods' by Alan Bryman, this volume provides a comprehensive introduction to the area of business research methods. It gives students an assessment of the contexts within which different methods may be used and how they should be implemented.

Analysing rankings in diverse higher education settings, this book draws on discourse analysis, theory, ethnography, and case studies, to consider the question of how knowledge is produced and shared.

The social sciences are becoming datafied. The questions once considered the domain of sociologists are now answered by data scientists operating on large datasets and breaking with methodological tradition, for better or worse. The traditional social sciences, such as sociology or anthropology, are under the double threat of becoming marginalized or even irrelevant, both from new methods of research which require more computational skills and from increasing competition from the corporate world which gains an additional advantage based on data access. However, unlike data scientists, sociologists and anthropologists have a long history of doing qualitative research. The more quantified datasets we have, the more difficult it is to interpret them without adding layers of qualitative interpretation. Big Data therefore needs Thick Data. This book presents the available arsenal of new methods and tools for studying society both quantitatively and qualitatively, opening ground for the social sciences to take the lead in analysing digital behaviour. It shows that Big Data can and should be supplemented and interpreted through thick data as well as cultural analysis.

Thick Big Data is critically important for students and researchers in the social sciences to understand the possibilities of digital analysis, both in the quantitative and qualitative area, and to successfully build mixed-methods approaches.

At last, the first systematic guide to the growing jungle of citation indices and other bibliometric indicators. Written with the aim of providing a complete and unbiased overview of all available statistical measures for scientific productivity, the core of this reference is an alphabetical dictionary of indices and other algorithms used to evaluate the importance and impact of researchers and their institutions. In 150 major articles, the authors describe all indices in strictly mathematical terms without passing judgement on their relative merit. From widely used measures, such as the journal impact factor or the h-index, to highly specialized indices, all indicators currently in use in the sciences and humanities are described, and their application explained. The introductory section and the appendix contain a wealth of valuable supporting information on data sources, tools and techniques for bibliometric and scientometric analysis - for individual researchers as well as their funders and publishers.

This collection of essays arose from a workshop held in Canberra in 2013 under the auspices of the Academy of Social Sciences in Australia to consider the impact of the encroachment of the market on public universities. While the UK tripled fees in 2013 and determined that the teaching of the social sciences and the humanities would no longer be publicly funded, it was feared that Australia would go further and deregulate fees altogether. In the best tradition of the social sciences, the contributors have assumed the role of critic and conscience of society to present penetrating analyses of the ramifications of the corporatisation of the university as neoliberalism continues to occupy the ascendant position in the political firmament. The dramatis personae in these analyses are students, academics, managers and political mandarins with the gendered character of corporatisation an important sub-theme.

A comprehensive foundation for stakeholder theory, written by many of the most respected and highly cited experts in the field.

Predictions are that sustainability becomes the next big topic for Human Resource Management after internationalization and globalization. This book gives new answers to these questions: - How can HRM contribute to attracting, developing and retaining highly qualified human resources over time? - How can a paradox perspective contribute to understanding and coping with paradoxical tensions? - How can sustainability be used as a 'deliberate strategy' for HRM? The conceptual part of the book looks at the notion of sustainability, opens it up for Strategic HRM and identifies blind spots in Strategic HRM theory. Paradox theory is introduced as an analytical framework for Sustainable HRM. Initial suggestions are made for sustainability strategies and for coping with paradoxes and tensions. The exploratory part examines how 50 European Multinationals communicate their understanding of sustainability and HRM and which HR issues and practices they are linking to the topic.

The purpose of this volume is to broadly discuss the media's responsibility to provide discursive contributions to the ethical and moral challenges of our times. At the crossroads of intellectual progress and profit-orientation, concentration tendencies in the academic publishing industry pose a threat to the reputation and integrity of higher education. The actions of whistleblowers like Edward Snowden have radically changed our perception of privacy, stirring debates about the ethical and moral dilemma attached to the disclosures. Islam and religion continue to rank as urgent topics in the news – with the most influential contributions to the public discourse often belonging to ideologically influenced Western voices. One century after the Bolshevik revolution in 1917, Russia is still negotiating how to categorize these events – which have recently been pointed out in a controversial TV show. The example of Nigeria makes clear that insecurity and national development go hand in hand with responsible press coverage, while the low self-perception of the Belarusian film industry is due partly to its depiction in the country's only cinematographic publication.

The *Journal of Business Ethics* was founded by Alex C. Michalos and Deborah C. Poff and published its first issue in March 1982. It is the most frequently cited business ethics journal in the world. The Journal has always offered a multi-disciplinary and international public forum for the discussion of issues concerning the interaction of successful business and moral virtue. Its

authors and readers are primarily scholars and students in social sciences and philosophy, with special interests in the interaction of these disciplines with business or corporate responsibility. Since the field of business ethics grew simultaneously with the growth of the Journal, a collection of its most cited articles is tantamount to a collection of the articles that had the greatest influence in defining the field over its first 30 years of development. In this anniversary volume, an overview of citation classics from the Journal is presented, the 33 most frequently cited articles are reproduced and brief reflections on the impact of the Journal on the field are given from over 100 scholars who authored citation classics and/or distinguished papers, as well as those who served on the Editorial Board and/or are recognized as leaders in the field.

These chapters on 'Responsible Leadership' represent the latest thinking on a topic of increasing relevance in a connected world. There are many challenges that still remain when it comes to establishing responsible leadership both in theory and practice. Whilst offering conceptualisations for the improvement of leadership is a first and perhaps easier response, what is more difficult is to facilitate the actual change to happen. These chapters will not only generate interest in the emerging domain of studies on responsible leadership, but also will pave the way for future research in this area in the years to come. Previously Published in the Journal of Business Ethics, Volume 98 Supplement 2, 2011?

This handbook is one of the first comprehensive research and teaching tools for the developing area of global media ethics. The advent of new media that is global in reach and impact has created the need for a journalism ethics that is global in principles and aims. For many scholars, teachers and journalists, the existing journalism ethics, e.g. existing codes of ethics, is too parochial and national. It fails to provide adequate normative guidance for a media that is digital, global and practiced by professional and citizen. A global media ethics is being constructed to define what responsible public journalism means for a new global media era. Currently, scholars write texts and codes for global media, teach global media ethics, analyse how global issues should be covered, and gather together at conferences, round tables and meetings. However, the field lacks an authoritative handbook that presents the views of leading thinkers on the most important issues for global media ethics. This handbook is a milestone in the field, and a major contribution to media ethics.

International trade is a key dimension of the world economy, it is a critical factor in raising living standards, increasing employment, and providing a larger variety of goods to consumers around the world. Despite the strong focus that international trade research has received in theoretical terms, the empirical aspects of trade are less clear and justify further research. In this context, it is essential for studies to focus on shedding light on the most important methods used to evaluate the multiple dimensions of trade within this international context. Trade has a myriad of direct and indirect effects, therefore touching several fields of research, including economics, management, finance, international

relations, political science, and sociology, which makes it essential to explore. The Handbook of Research on the Empirical Aspects of Strategic Trade Negotiations and Management provides a systematic overview of the latest trends in the empirical analysis of trade from international perspectives. It provides a survey on the methods used to evaluate a specific topic in international trade, enhance knowledge about the multiple facets of international trade around the world, and grant in-depth surveys of previous empirical findings on specific topics in international trade. Important topics covered within this book include trade diversification, regional centrality, ethical pricing, globalization, cultural impacts, and open economies. This book is a valuable reference tool for government officials, policy makers, managers, executives, economists, practitioners, stakeholders, researchers, academicians, and students.

What kind of ethics in world politics is possible if there is no foundation for moral knowledge or global reality is at least complex and contingent? Furthermore, how can an ethics grapple with difference, a persistent and confounding feature for global politics? This book responds to the call for a bold and creative approach to ethics that avoids assuming or aspiring to universality, and instead prioritizes difference, complexity and uncertainty by turning to reflexivity, not as method or methodology, but as a practice of ethics for politics. This practice, 'ethical reflexivity', offers individuals, organizations and communities tools to recognize, interrogate and potentially change the stories they tell about politics—about constraints, notions of responsibility and visions of desirability. The benefits and limits of ethical reflexivity are investigated by the author, who engages writing on critique, rhetoric, affect and relationality, and carefully considers dominant and alternative framings of difficult issues in International Relations (IR)—the 1994 genocide in Rwanda, and the US policies of 'enhanced interrogation' and drone strikes. This path-breaking study provokes new possibilities for agency and action and contributes to a growing literature in IR on reflexivity by uniquely elaborating its promise as an ethics for politics, and by drawing on thinkers less utilized in discussions of reflexivity such as Hannah Arendt, Michel Foucault and Aristotle. This book will appeal to scholars and upper-level graduates in several sub-fields of IR, including international/global ethics, IR theory, global governance, international organizations, non-governmental organizations, foreign policy analysis and US foreign policy.
