HTML The language HTML has arrived at middle age in standard Version 4.01 and isn't relied upon to change once more. Or maybe, HTML is being subsumed and modularized as a component of Extensible Markup Language (XML). Its new name is XHTML,

Extensible Hypertext Markup Language. The rise of XHTML is simply one more section in the frequently wild history of HTML and the World Wide Web, where disarray for creators is the standard, not the exemption. At the most noticeably awful point, the older folks of the World Wide Web Consortium (W3C) answerable for acknowledged and adequate employments of the language - i.e., principles - lost control of the language in the program "battles" between Netscape Communications and Microsoft. The failed HTML+ standard failed right from the start, and HTML 3.0 turned out to be so impeded in banter that the W3C essentially racked the whole draft standard. HTML 3.0 never occurred, notwithstanding what some crafty advertisers asserted in their writing. All things being equal, by late 1996, the program makers persuaded the W3C to deliver HTML standard Version 3.2, which in every way that really matters, just normalized the greater part of the main program's (Netscape's) HTML augmentations. Information and Communication Technology (ICT) is an extended term for Information Technology (IT) which stresses the role of unified communications. The term ICT is also used to refer to the convergence of audio-visual and telephone networks with computer networks through a single cabling or link system. There are large economic incentives (huge cost savings due to elimination of the telephone network) to merge the telephone network with the computer network system using a single unified system of cabling, signal distribution and management. However, ICT has no universal definition, as "the concepts, methods and applications involved in ICT are constantly evolving on an almost daily basis". The broadness of ICT covers any product that will store, retrieve, manipulate, transmit or receive information electronically in a digital form, e.g. personal computers, digital television, email, robots. For clarity, Zuppo provided an ICT hierarchy where all levels of the hierarchy "contain some degree of commonality in that they are related to technologies that facilitate the transfer of information and various types of electronically mediated communications". Skills Framework for the Information Age is one of many models for describing and managing competencies for ICT professionals for the 21st century. Physical education, also known as Phys Ed., PE, Gym or Gym class, and known in many Commonwealth countries as physical training or PT, is an educational course related of maintaining the human body through physical exercises (i.e. calisthenics). It is taken during primary and secondary education and encourages psychomotor learning in a play or movement exploration setting to promote health. Information and Communication Technologies (ICT) in the field of physical education by the professed and the students. Finally the main problems related to the use of these technologies in classrooms are analyzed. All this in order t to shed light on a very topical issue regarding the education of our youth. Studies show that ICTs are increasingly present in the field of physical education, but much remains to be done to make an effective use of them in education.
